

It is not uncommon for the efficiency of a power station to be increased by one percent. This means thousands of euros of earnings every year.

Fortum Ecotuning® finds the weak links in your operational economy. You can recoup the money you invest in our service multiple times back.

HOW DOES ECOTUNING® WORK IN PRACTICE?

Our training programme ensures that your staff uses the current technology properly and understands the financial impact.

Together, we will squeeze more efficiency out of your power station and uncover the bottlenecks for energy efficiency.

You will get a report monthly on your desk, in which we will list the savings and proposals for development.

WHAT ARE THE BENEFITS?

- Your staff will benefit from a training programme.
- Differences in efficiency among shifts will be history. We will teach everyone the best practices and we will participate in the changes.
- You will develop the energy efficiency of your power station without any risks.
- The investments you have already made will be more profitable than ever. You will measure profit in millions.
- Emissions from your power station will fall.

WHO IS ECOTUNING® INTENDED FOR?

Ecotuning® is a sure-fire solution to maximise the profitability of your power station. We do not only make proposals for development, but we also commit to the development of your staff. We take full responsibility for its success.

The price of the year-long project is EUR 150 000, excluding taxes. You will recoup your investments in less than four months.

Do you want to know more? You can find out more from Tuula Ruokonen, +358 50 45 32731, tuula.ruokonen@fortum.com and Ilkka Salmensaari, +358 50 45 34876, ilkka.salmensaari@fortum.com.

We guarantee your profit

You will obtain EUR 500 000 in savings or increased efficiency. We will refund you the EUR 150 000 you pay for the service if we do not keep our promise within the year*.

*We will confirm the target saving and price during the one day initial review before the contract is signed.
