Appr. 135,000 shareholders

- Power and heat company in the Nordic countries, Russia, Poland and the Baltics
- Listed at the Helsinki Stock Exchange since 1998
- Among the most traded shares on the Nasdaq Helsinki stock exchange
- Market cap ~14 billion euros

31 August 2017

Capital returns: 2016 EUR 1.10 per share ~ EUR 1 billion

- Fortum's dividend policy is based on the following preconditions:
 - The dividend policy ensures that shareholders receive a fair remuneration for their entrusted capital, supported by the company's long-term strategy that aims at increasing earnings per share and thereby the dividend.
 - When proposing the dividend, the Board of Directors looks at a range of factors, including the macro environment, balance sheet strength as well as future investment plans.

Fortum's target is to pay a stable, sustainable and over time increasing dividend of 50-80% of earnings per share excluding one-off items

Fortum has since 1998 annually paid dividends in total ~13,603 MEUR

Fortum – For a cleaner world

Megatrends

Climate change and resource efficiency
Urbanisation
Active customers
Digitalisation, new technologies

Vision

For a cleaner world

Mission

We engage our customers and society to drive the change towards a cleaner world. Our role is to accelerate this change by reshaping the energy system, improving resource efficiency and providing smart solutions. This way we deliver excellent shareholder value.

Strategy

Drive productivity and industry transformation

Grow in solar and wind

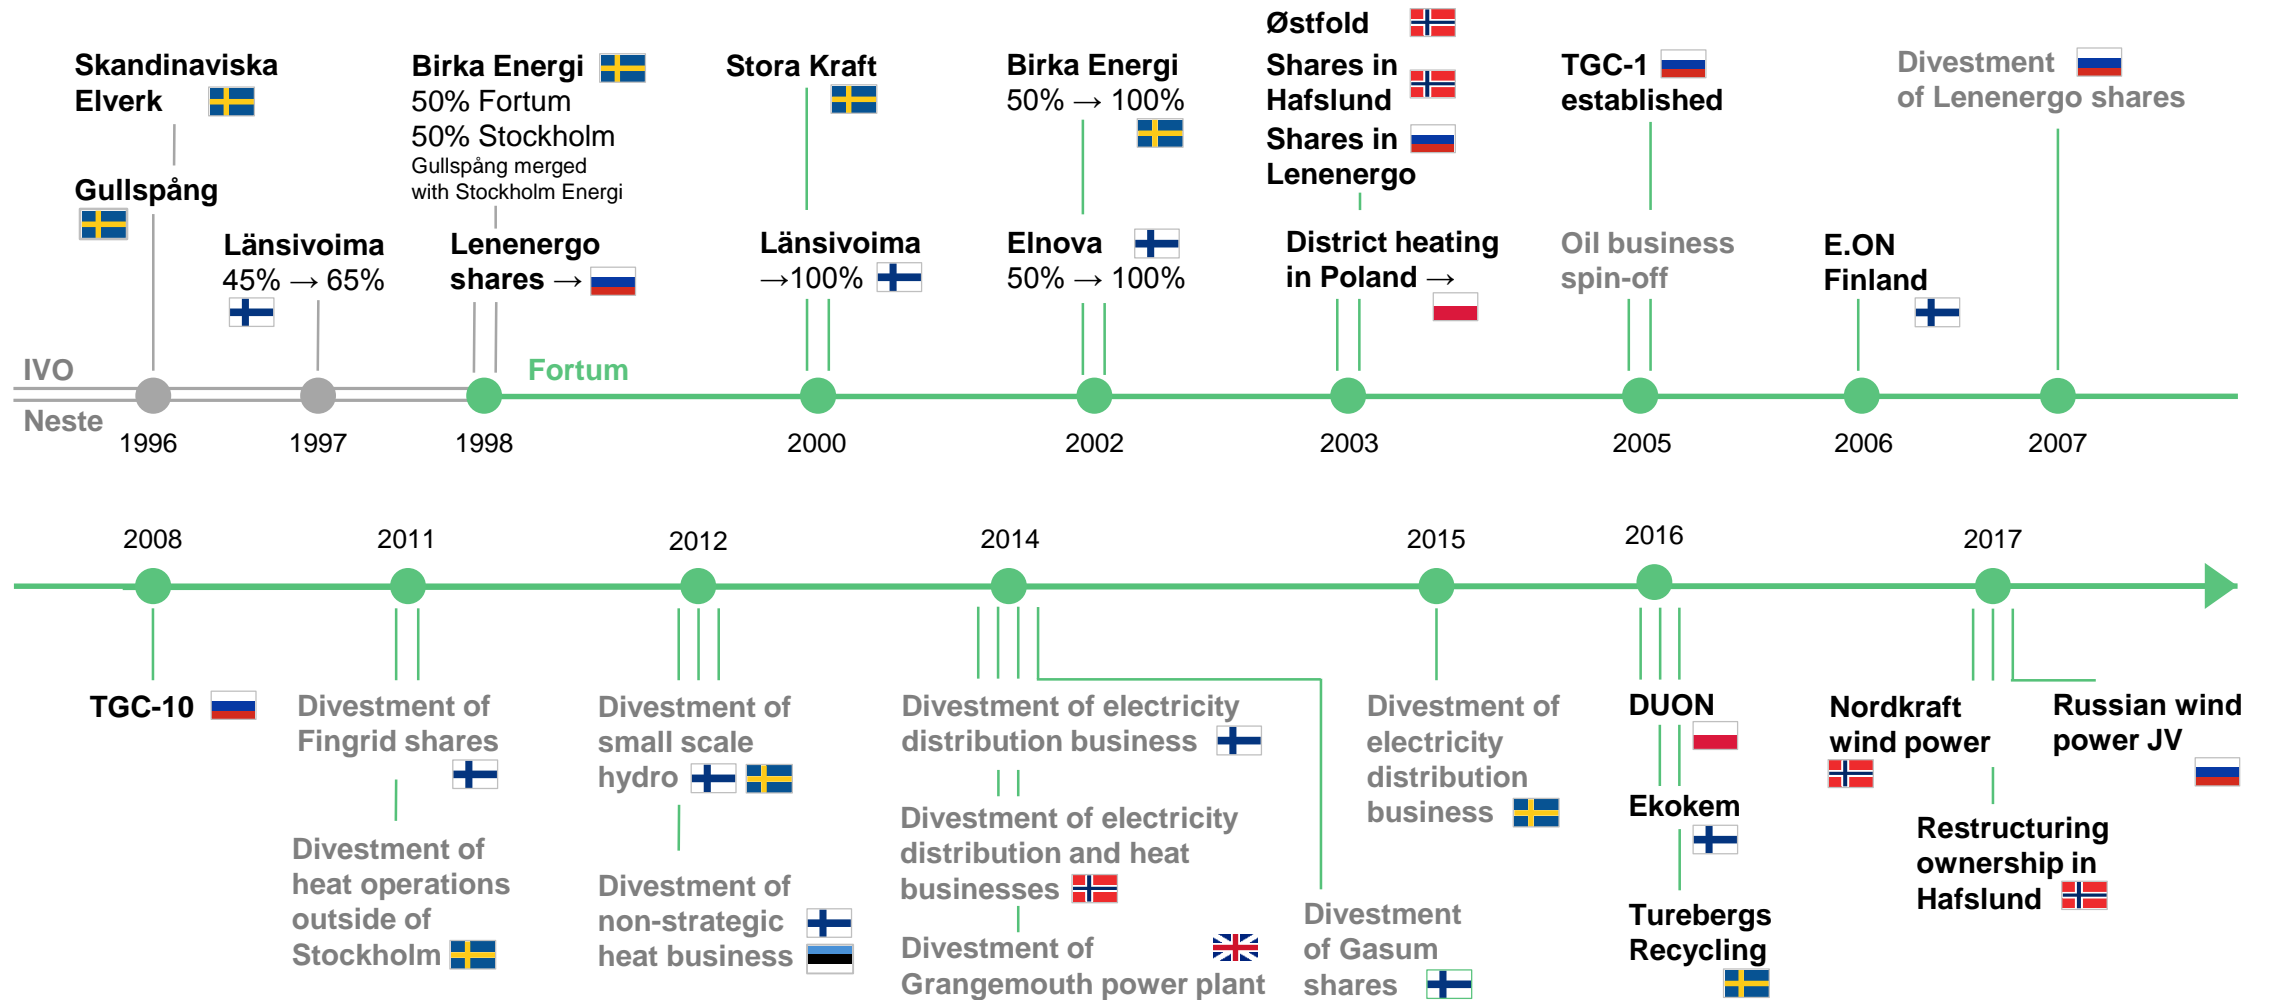

Create solutions for sustainable cities

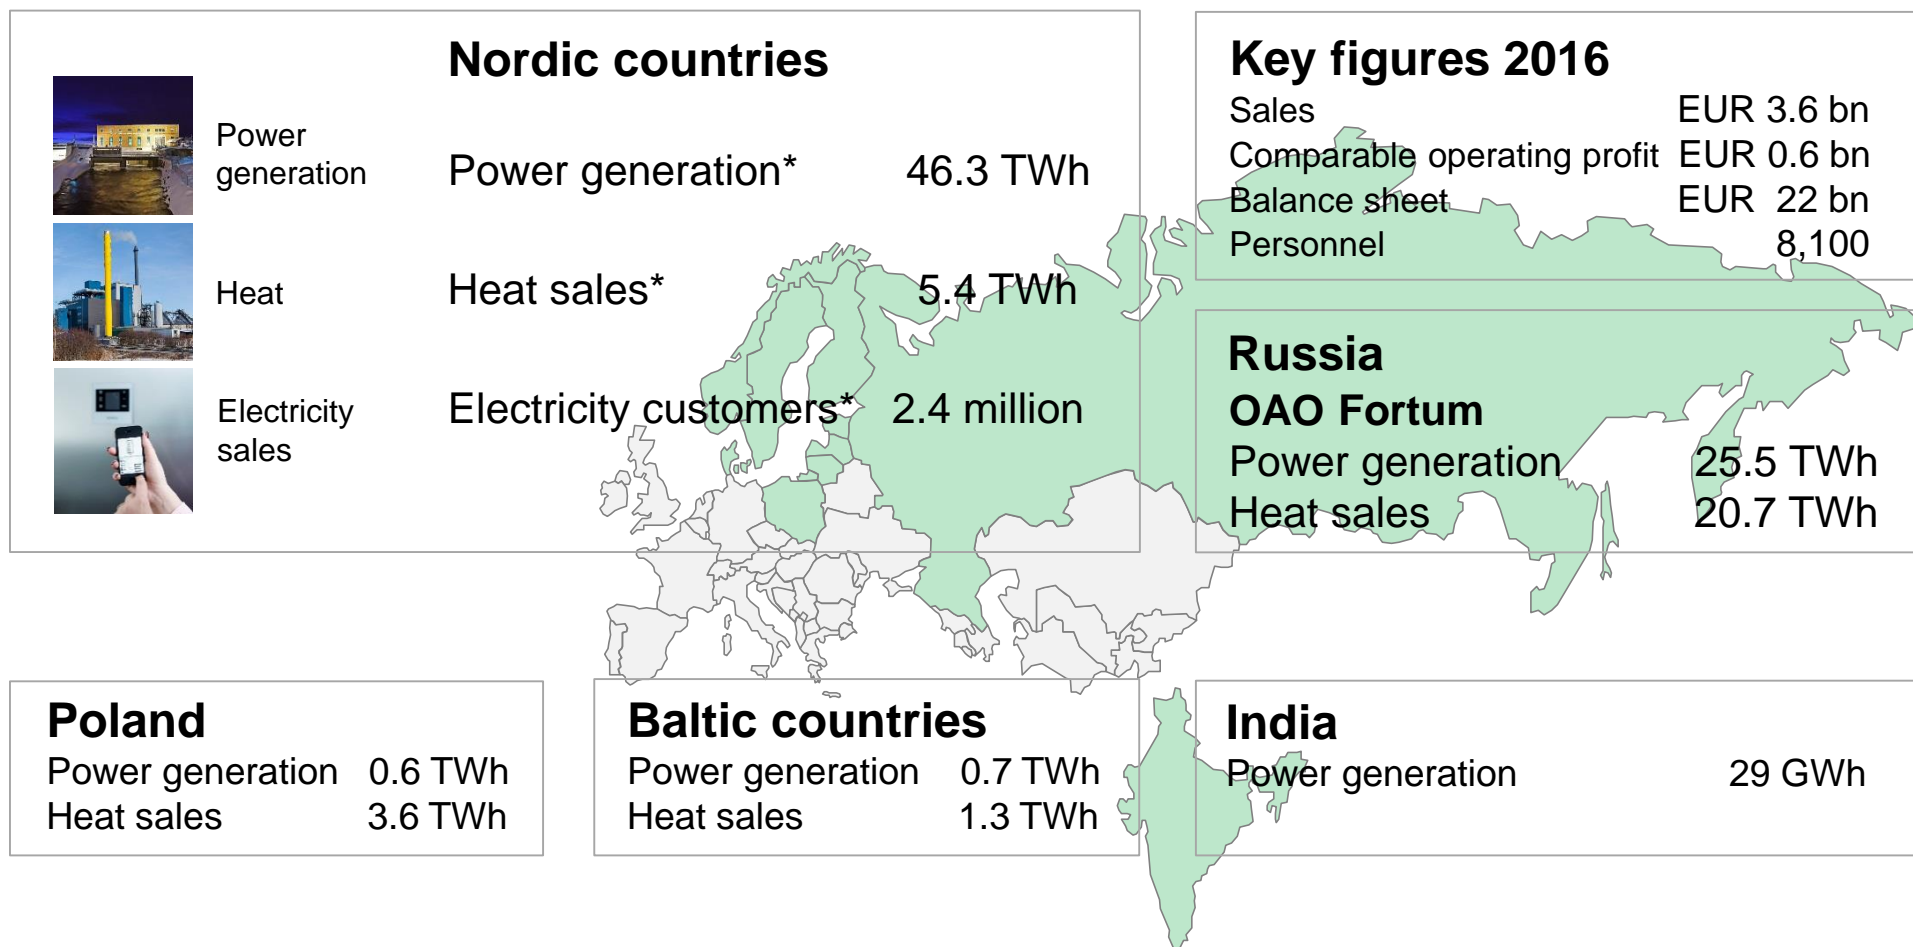

Build new energy ventures

Our strategic route

Our current geographical presence

* Pro forma figures including parts of Hafslund and Klemetsrud plant; 1.1 million electricity customers, heat sales 1.7 TWh and CHP power generation 0.1 TWh

Still a highly fragmented Nordic power market

Fortum has largest electricity customer base in the Nordics

Power generation in 2016

395 TWh

>350 companies

Electricity retail

15 million customers

~350 companies

Fortum mid-sized European power generation player; major producer in global heat

Source: Company information, Fortum analyses, 2015 figures pro forma, Chinese heat production data incomplete.

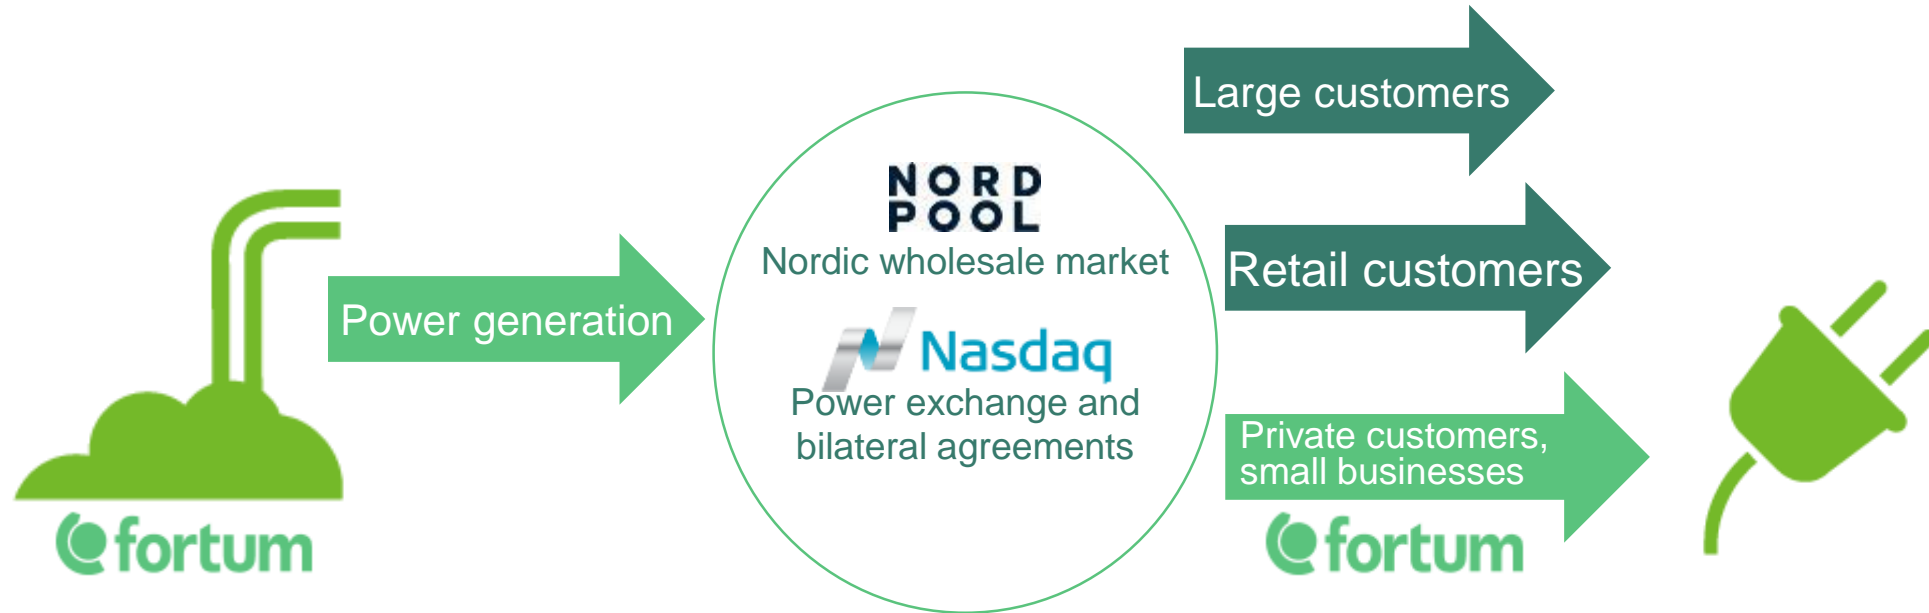

Biggest nuclear and hydro generators in Europe and Russia

1) Formerly GDF SUEZ

Source: Company information, Fortum analyses, 2013 figures pro forma

Fortum in the Nordic electricity value chain

Fortum's power and heat production by source

**Fortum's power generation
in 2016**

Total generation 73.1 TWh
(Generation capacity 13,334 MW)

**Fortum's heat production
in 2016**

Total production 27.8 TWh
(Production capacity 13,738 MW)

Fortum's European power and heat production

Fortum a forerunner in sustainability

We engage our customers and society to drive the change towards a cleaner world. Our role is to accelerate this change by reshaping the energy system, improving resource efficiency and providing smart solutions. This way we deliver excellent shareholder value.

Fortum is listed in several sustainability indexes:

- CDP Nordic rating
- STOXX® Global ESG Leaders indices
- ECPI® Indices
- oekom
- OMX GES Sustainability Finland index
- Euronext Vigeo Eurozone 120 index

Fortum's carbon exposure among the lowest in Europe

Note:
Only European generation except "Fortum total" which includes Russia. In 2016 most of E.ON's generation was transferred to Uniper.
Fortum's specific emissions of the power generation in 2016 in the EU were 28 g/kWh and in total 173 g/kWh.

| Hydro, MW | Power | Year |
|---------------------|-------|----------|
| Maintenance/upgrade | ~10 | Annually |

Total: ~ 580 MW power and ~ 300 MW heat capacity (Fortum's share)

Market coupling milestones

- Cross-border power flows optimised by power exchanges

- Market coupling between NL, BE and FR since 2006
- Germany – Nord Pool coupling started 11/2009
- Market coupling for Central Western Europe (DE, FR, NL, BE) since 11/2010 with a continued coupling with Nord Pool. NorNed (NO-NL) and BritNed (UK-NL) included in 2011
- Nord Pool price area for Estonia in 2010, Lithuania in 2012 and Latvia in 2013. Poland coupled with Nord Pool since 2010
- Czech, Slovakia and Hungary coupled together since 2012. Romania joined in 2014
- A common day-ahead market coupling for the whole north-western Europe (incl. Spain & Portugal) was started in 2014. Italy and Slovenia joined in 2015
- Flow-based cross-border capacity allocation for further trade optimisation taken into use in May 2015 for the CWE region. Nordic flow-based implementation planned by 2020
- CEE (Central Eastern Europe) market coupling region due to join latest in 2019 with flow-based capacity allocation. Switzerland waiting for agreement with the EU
- In addition to day-ahead coupling, European-wide intraday market coupling is due to be implemented in 2018
- Balancing market integration under development as well, based on both regional projects and the EU Guideline on Electricity Balancing, approved in comitology 3/2017

Current transmission capacity from Nordic area is over 6,000 MW

| Countries | Transmission capacity MW | |
|----------------------|--------------------------|--------------|
| | From Nordics | To Nordics |
| Denmark - Germany | 2,225 | 2,100 |
| Sweden - Germany | 615 | 615 |
| Sweden - Poland | 600 | 600 |
| Sweden - Lithuania | 700 | 700 |
| Norway - Netherlands | 723 | 723 |
| Finland - Estonia | 1,016 | 1,016 |
| Finland - Russia | 320 | 1,300 |
| Total | 6,199 | 7,054 |

- Theoretical maximum in transmission capacity ~40 TWh per annum, but restrictions especially between DK & DE
- Net export from the Nordic area to Continental Europe and Baltics during year 2016 was 10 TWh
- During 2015 the net export was 18 TWh
- Approximately 25 TWh of net export is now reachable

Nordic, Baltic, Continental and UK markets are integrating

– Interconnection capacity will double by 2023

The Northern Seas Offshore Grid and the Baltic Energy Market Integration Plan are included as priority electricity corridors in EU's Infrastructure Guidelines, approved in April 2013

New interconnections will double the export capacity to over 12,000 MW by 2023

Two 1,400 MW NO-UK links as EU Projects of Common Interest: NSL to England due to be ready in 2021, NorthConnect to Scotland still requiring Norwegian permission

1,400 MW NordLink as first direct NO-DE link is being built by end-2019

New 1,400 MW DK-UK Viking Link not yet decided, but planned to be built by end-2022

700 MW COBRACable from DK to NL due to be ready in March 2019

Jutland – DE capacity planned to grow by 860 MW in 2020, with further 1,000 MW increase in 2022

New internal Nordic grid investments provide for increased available capacity for export to the Continent and Baltics

EU's Connecting Europe Facility co-financing 3rd EE-LV transmission line, due to be ready by 2020

Svenska Kraftnät and 50Hertz signed 1/2017 a cooperation agreement on building the 700 MW Hansa PowerBridge DC link between Sweden and Germany by 2025/26

New 400 MW Zealand – DE connection via Kriegers Flak offshore wind area by end-2018

Responsibilities

Loviisa: Fortum is the owner, licensee and operator with all the responsibilities specified in the Nuclear Energy Act, Nuclear Liability Act, and other relevant nuclear legislation

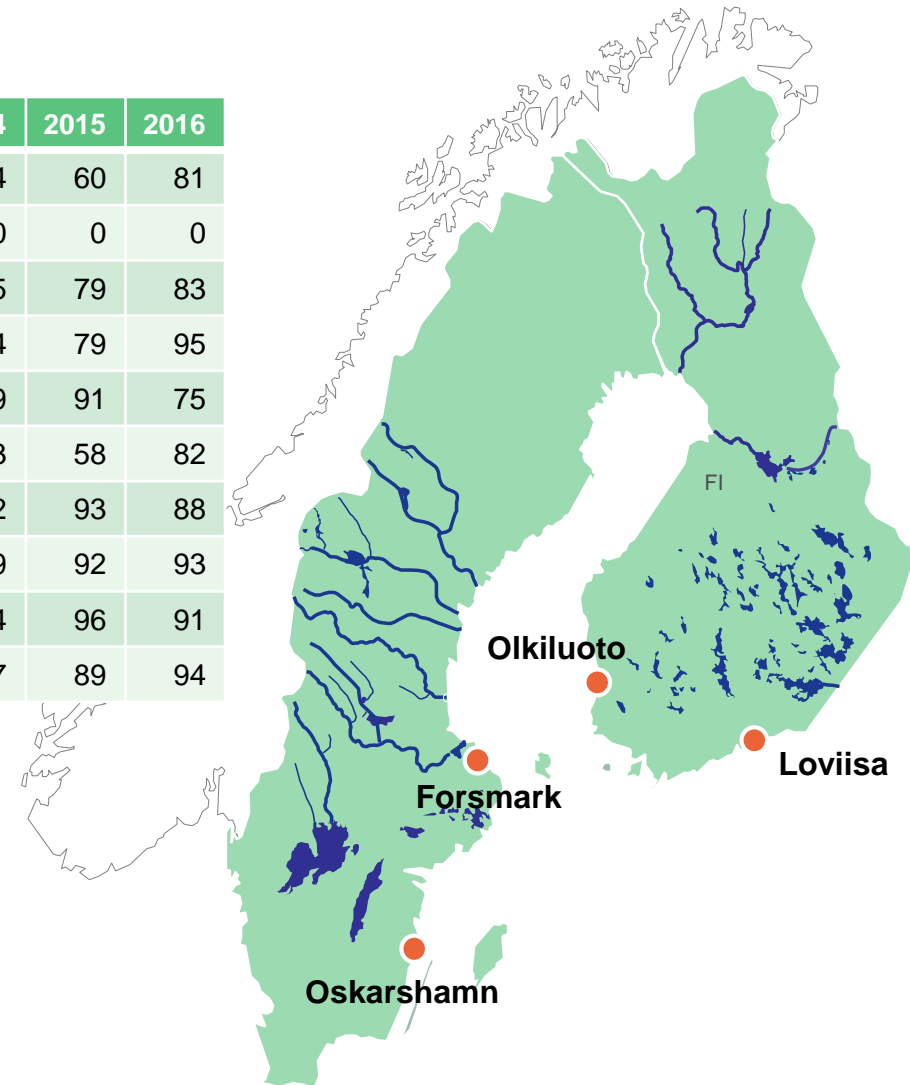

Other units: Fortum is solely an owner with none of the responsibilities assigned to the licensee in the nuclear legislation. Other responsibilities are specified in the Companies Act and the Articles of Association and are mostly financial.

¹⁾ Generation refers to technical resemblance based on KSU classification and not to reactor design generations. All reactors are of Generation II except Olkiluoto-3 (EPR) which is of Generation III.

Planned capacity increase:

- Forsmark 1, potential capacity increase of total ~110 MW in 2017-2020.

Closing of the units:

- OKG AB's Extraordinary shareholders' meeting decided on 14 October 2015 on the closure of Oskarshamn nuclear power plant units 1 and 2 in Sweden.
- Unit 1 was be taken out of operation on June 17, 2017. Unit 2 has been out of operation since June 2013 due to an extensive safety modernisation, and it will not be put back into operation. The closing process for both units is estimated to take several years.

PWR = (Pressurized Water Reactor) The most common reactor type in the world (e.g. all French units, most US units). Also the Loviisa units are PWRs, but based on Russian design. High pressure prevents water from boiling in the reactor. The steam rotating the turbine is generated in separate steam generators.

BWR = (Boiling Water Reactor) Similar to the PWR in many ways, but the steam is generated directly in the reactor. Popular reactor type e.g. in Sweden, the US and Japan.

Third party nuclear liability in case of severe accident

Fortum - a major player in Russia

OAo Fortum (former TGC-10)

- Operates in the heart of Russia's oil and gas producing region, fleet mainly gas-fired CHP capacity
- 25 TWh power generation, 21 TWh heat production in 2016 Investment programme to add 85%, almost 2,200 MW to power generation capacity

TGC-1

- 29.5% of territorial generating company TGC-1 operating in north-west Russia
- ~7,000 MW electricity production capacity (more than 40% hydro),
~26 TWh electricity, ~28 TWh heat in 2016

In December 2014, Fortum and Gazprom Energoholding signed a protocol to start a restructuring process of TGC-1. Currently Gazprom Energoholding owns 51.8% of the TGC-1 shares and Fortum 29.5%. As part of the restructuring, Fortum will establish a joint venture together with Rosatom to own the hydro assets of TGC-1, while Gazprom Energoholding continues with the heat and thermal power businesses of TGC-1. By utilising its present stake in TGC-1, Fortum would obtain a 75-plus-percent ownership in the new hydro power company, and Rosatom a 25-minus-percent minority holding.

In October 2015, Fortum announced that the discussions related to the potential restructuring of TGC-1 will continue, and it is not possible to estimate the time schedule or outcome of the discussions.

Fortum's performance in Q2 2017

- Wholesale prices increased, but are still on low levels
- Comparable operating profit EUR 109 (122) million, decrease mainly due to lower hydro volumes
- Continued strong result in the Russia segment EUR 53 (34) million
- Earning per share EUR -0.08 (0.06) impacted by
 - Swedish income tax case EUR -0.14 (0.00) and
 - Items affecting comparability EUR -0.04 (-0.05)
- Hafslund restructuring announced in April, closing expected during Q3
- Reduction of fixed costs according to earlier announced plan (EUR 100 million) has proceeded well
- Increased development efforts in new ventures and R&D affected the results of the Other segment, but is expected to start paying back from 2018
- Oskarshamn, unit 1 shut down 17 June 2017

Market conditions in Q2 2017

Nordic countries

- Electricity consumption totalled 88 (86) TWh in Q2 2017. Colder weather in Q2 2017 than in Q2 2016. January-June consumption 202 (203) TWh
- System spot price 27.4 (23.9) EUR/MWh, Finnish area price was 30.9 (30.2) EUR/MWh and Swedish (SE3) area price 28.5 (26.5) EUR/MWh
- Market price of CO₂ emission allowances (EUA) was EUR 6.5 per tonne at the beginning of the year and EUR 5.0 per tonne at the end of the second quarter of 2017

Russia

- Electricity consumption was 238 (230) TWh in Q2 2017. In Fortum's operating area in the First price zone 184 (176) TWh in Q2 2017
- Average electricity spot price, excluding capacity price, in Urals hub remained at the same level as in the second quarter of 2016

Price development in the Nordic region and Russia

NOTE: Achieved power price in roubles increased appr.5%
Includes capacity income

| Net cash from operating activities | 232 | -5 | 514 | 370 | 621 | 765 |

Generation

- Lower hydro production volumes and lower achieved power price burdened the results
- Excellent nuclear availability and higher thermal volumes partly offset the result effect
- Nordic hydro reservoirs 2 TWh lower than a year ago

| MEUR | II/17 | II/16 | I-II/17 | I-II/16 | 2016 | LTM |
|-----------------------------|-------|-------|---------|---------|-------|-------|
| Sales | 402 | 384 | 876 | 851 | 1,657 | 1,682 |
| Comparable EBITDA | 111 | 124 | 277 | 306 | 527 | 498 |

| Comparable RONA % | | | | | 6.9 | 6.0 |
| Gross investments | 42 | 50 | 67 | 77 | 203 | 193 |

City Solutions

- Colder weather positively impacted the heat sales 5.4 (4.7) TWh
- Strong sales and EBITDA improvement mainly due to Ekokem
- Comparable operating profit also positively impacted by favourable fuel mix

| MEUR | II/17 | II/16 | I-II/17 | I-II/16 | 2016 | LTM |
|-----------------------------|-------|-------|---------|---------|-------|-----|
| Sales | 205 | 121 | 495 | 349 | 782 | 928 |

| Comparable RONA % | | | | | 5.9 | 5.8 |
| Gross investments | 43 | 17 | 63 | 37 | 807 | 833 |

Consumer Solutions

- Sales increased, mainly due to the increased Nordic prices and the higher trading activity in Poland
- Lower average margins in electricity products and increased focus and spend on development of new digital services impacted the result negatively
- Strong competition in the Nordics is expected to continue challenging, putting pressure on sales margins
- Announced Hafslund deal will almost double the Nordic customer base to 2.4 million customers

| MEUR | II/17 | II/16 | I-II/17 | I-II/16 | 2016 | LTM |
|-----------------------------|-------|-------|---------|---------|------|-----|

| Customer base, million | | | 1.36 | 1.35 | 1.36 | |
| Gross investments | 1 | 3 | 3 | 117 | 120 | 6 |

Russia

- Sales increased due to strengthening RUB, higher CSA payments and heat sales
- Lower fuel costs and improved bad-debt collection also improved the results
- 1,000 MW of 50/50 owned Fortum-RUSNANO wind investment fund bids selected in Russian CSA auction

| MEUR | II/17 | II/16 | I-II/17 | I-II/16 | 2016 | LTM |

* Includes the payment of income taxes EUR 127 million regarding Swedish income tax case

Debt portfolio and average interest rate on the balance sheet date

30 June 2017

Maturity profile

- Total interest-bearing debt EUR 4,711 million
 - Average interest 3.4% (2016: 3.5%)
 - Portfolio mainly in EUR and SEK with average interest cost 2.0% (2016: 2.1%)
 - EUR 761 million (2016: 805) swapped to RUB, average interest cost including cost for hedging 10,7% (2016: 11.4%)

1) In addition Fortum has received EUR 116 million based on Credit Support Annex agreements with several counterparties. This amount has been booked as a short term liability.

Fortum has significant financial headroom available for market consolidation

| MEUR | LTM | 2016 | Target |
|-----------------------------------|-------|-------|--------------|
| Comparable EBITDA | 1,091 | 1,015 | |
| Interest-bearing net debt | 605 | -48 | |
| Comparable net debt/EBITDA | 0.6 | 0.0 | Around 2.5 |
| ROCE % Return on capital employed | 4.3 | 4.0 | At least 10% |

Liquid funds totalled EUR 4.1 billion
Committed credit lines total EUR 1.9 billion

Outlook

Nordic markets

- Fortum continues to expect that the annual electricity demand growth will be approximately 0.5% on average
- Electricity is expected to continue to gain share of total energy consumption

2017 Annual capex estimate, excluding acquisitions

- Approximately EUR 800 million (maintenance capex below EUR 300 million)

Hedging

- Rest of 2017 approximately 45% hedged at EUR 30/MWh
- 2018 approximately 45% hedged at EUR 28/MWh

Taxation

- Effective tax rate for 2017 for the Group 19-21% *
- In Sweden
 - Nuclear taxes reduced from 1 July 2017 and abolished by 2018
 - Hydro assets' real estate tax rate decreased from 2.8% to 0.5% over a four-year period
- Swedish Administrative Court ruled (on 30 June 2017) in Fortum Sverige AB's favour regarding hydro real-estate tax for 2009-2014 (EUR 53 million). The tax authority may still appeal.

* Excluding the impact of the share of profits of associated companies and joint ventures, non-taxable capital gains, and a Swedish income tax case.
