

Process control with TOPi® Browser is flexible and easy. All TOPi® applications are efficiently used by the whole organisation with one easy-to-use user interface.

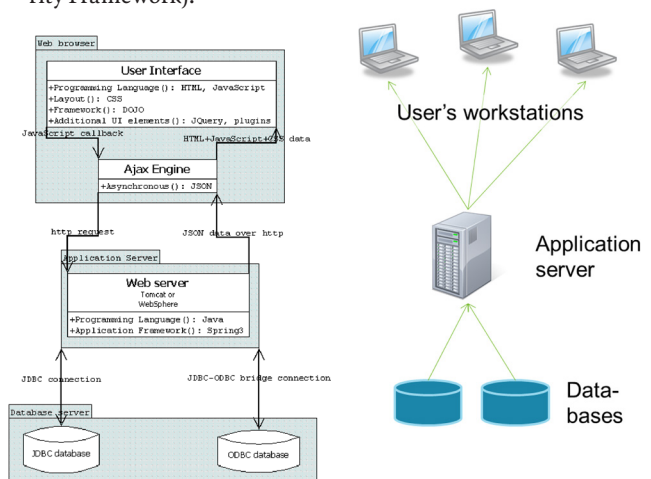

TOPi® Browser offers a powerful browser based environment for the whole company's process and energy management, suitable for both operators and top management. TOPi® Browser web platform incorporates all your important TOPi® tools from reports and operating point displays to more accurate control of electricity balance.

MAIN BENEFITS OF TOPi® BROWSER:

- Easy to access from all over the company's network - Not dependent on a certain workstation
- Easy to use - Clear and consistent user interface
- Modifiability - According to the customer's needs
- Upgradability - Centralized application server
- Fast and efficient - Short response times even with large amounts of data
- Multi-language support
- Supports mobile devices
- Inbuilt user access management
- Automatic support of common file formats: pdf, csv, xls, xlsx, html

The architecture of TOPi® Browser's application platform has been carefully designed using the latest network technologies (AJAX, HTML5, Dojo Framework, Spring Tool Suite, Spring Security Framework).

TOPi® BROWSER INCORPORATES ALL TOPi® TOOLS:

- Report - Table and graphical reports
- OP (Operating Point) - Operating point and start-up displays
- OE (Operational Economy) - Enhancing operational economy
- Balancer and Calendar - Strengthen electricity trading and production planning
- ProView - Process displays and trends

With TOPi® Browser all the plant's personnel can access the information they need. TOPi® Browser can be used with your PC at the office, with a workstation at the control room or with a tablet during a walk around the power plant.
